the value
Hernquist (1990) analytic
jeans.sigmar (quadrature)
MC sample ($N = 4 \times 10^6$)
$\sigma_r(r)$
r
the derivative, two independent ways
jax.grad of the quadrature
jax.grad through the sample
agreement within MC noise:
max 5.5σ, median 0.6σ
$d\sigma_r/dr$
r
