jit amortization: Plummer F_R (GPU, float64)
(a) compile-once, run-many
call 0 = compile
$N = 10^4$
$N = 10^6$
dotted: eager (un-jit) per call
wall-time per call (ms)
call index
(b) jit vs eager break-even ($N = 10^6$)
jit (compile + run)
eager (un-jit)
break-even ≈ 71 calls
cumulative wall-time (ms)
number of calls
